

Template:Image

[\[edit\]](#) [\[purge\]](#) [Template documentation](#)

This documentation transcluded from Template:Image/doc([edit](#) | [history](#))

This template can be used as a wrapper to simplify the inclusion of an image in a template, where users may use several different forms of syntax.

It is primarily of use in templates and should **not** be used in articles directly.

Usage

- {{Image|Example.svg|20px}} ? Just another example

Note that additional parameters are (deliberately) ignored if full image syntax is passed in the first parameter. You can pass up to five parameters directly otherwise:

- {{Image|Example.svg|20px|thumb|none|Foo}} ?

Foo

You can also pass arbitrary parameters accepted by the Image syntax if you separate them with {{!}}. You may need to number them explicitly if they contain an equals sign "=":

- {{Image|Example.svg|2= 20px{{!}}link=Main Page}} ? Just another example
